EDUCATION

Towson University **Towson, MD**
Bachelor of Science, Computer Science *August 2023 - May 2027*
Coursework: Data Structures, Algorithms, Database Design, Web Development, Calculus, Statistics, Operating Systems, Software Engineering, Programming Language and Design

SKILLS

Languages: Python, Java, C++, JavaScript, SQL, Swift
Technologies: React, FastAPI, Node.js, MongoDB, NoSQL, MySQL, REST APIs, LLM APIs, Git, GitHub, GitLab

EXPERIENCE

Applebee's **Towson, MD**
Server *August 2025 - Present*

- Managed up to **11** tables simultaneously during high-volume shifts by prioritizing tasks in real time, maintaining service quality under pressure
- Processed orders and payments accurately on point-of-sale systems in a fast-paced, deadline-driven environment
- Partnered with kitchen and front-of-house staff to resolve order issues quickly, strengthening cross-team communication

Terrapin STEM and Sport Camp **Laurel, MD**
Camp Counselor *June 2024 - August 2024*

- Led daily STEM-focused activities, translating technical concepts into clear, age-appropriate instruction
- Supervised **30+** campers as group leader, adapting plans on the fly to keep every session safe and on schedule
- Co-designed and delivered engaging STEM curriculum with fellow counselors throughout the camp session

PROJECTS

SmartCart | *(Python, FastAPI, React, MongoDB, Claude API)*

- Built a full-stack shopping list application using Python, FastAPI, React, and MongoDB, developing a **13**-endpoint REST API for item creation, editing, budgeting, and persistence
- Integrated an LLM that converts natural-language requests into up to **25** priced shopping items per prompt, validating structured JSON responses before persisting data
- Engineered a live budget tracker that breaks down spending across **11** store sections, with item editing and a responsive light/dark interface

Expense Tracker | *(Java, File I/O)*

- Developed a command-line expense tracker in Java with full CRUD functionality, enabling users to log and categorize expenses
- Architected a **3**-layer design separating the data model, business logic, and CLI, keeping the codebase modular and object-oriented
- Implemented persistent storage with Java file I/O, preserving expense data and category totals across sessions

DoroTracker | *(Node.js, MySQL, Railway)*

- Collaborated on a full-stack study planner using Node.js and MySQL, implementing assignment tracking, automated scheduling, and Pomodoro study sessions
- Implemented hashed-password authentication, user authorization, and persistent MySQL data storage to keep student accounts and assignments isolated
- Developed schedule regeneration logic that dynamically rebalances study plans based on deadlines, estimated effort, and completed or missed assignments

OS Shell Project | *(C++)*

- Engineered a custom command-line shell in C++ that parses user input and executes core shell commands
- Implemented process execution logic to model how operating systems interpret commands and launch programs
